

Pankaj Kurade
Angular Developer

+91-7411942021 • pankajkurade316@gmail.com • <https://www.linkedin.com/in/pankaj-kurade/> • Belgaum, Karnataka

Summary

Angular Developer with 3+ years of experience in designing and developing robust, scalable single-page applications using **Angular, TypeScript, HTML, and CSS**. Skilled in building responsive, component-driven interfaces, dynamic dashboards, and real-time web applications. Strong expertise in **REST API integration, RxJS** for reactive programming, and performance optimization across complex Angular applications. Proficient in, reusable component architecture, and writing clean, maintainable, and modular code. Experienced in collaborating within **Agile/Scrum** teams, delivering high-quality, business-focused solutions while adhering to modern Angular standards and best practices.

SKILLS

Frameworks & Libraries Angular, Angular Material, RxJS, TypeScript, RESTful API Integration, Angular CLI, SPA Development, PrimeNG, Chart.js, Postman	Project Management & Collaboration GitHub, Sprint Planning, Scrum, Agile Methodologies, VS Code	Frontend Development HTML5, CSS3, JavaScript ES6, Responsive UI Design, Flexbox, Bootstrap, Wireframing, Figma
AI & Productivity Tools GitHub Copilot, Cursor AI		

Experience (3.2)

Angular Developer Persistent Systems	Pune 2024 - Present
Persistent Systems is Service based company delivering scalable and user friendly applications tailored to client needs. - Developed single-page applications (SPAs) using Angular, TypeScript, and RxJS, delivering scalable, maintainable, and performance-optimized frontend solutions. - Built reusable, modular, and component-driven UI elements, improving code consistency and reducing development effort across the application. - Integrated RESTful APIs for dynamic data rendering, real-time updates, and smooth interaction between frontend and backend services. Implemented features such as search, filters, dashboards, and interactive components, enhancing functionality and user experience. - Performed debugging, performance optimization, and code refactoring to improve load time, responsiveness, and overall application efficiency. - Worked closely with product owners, backend developers, and QA teams in an Agile/Scrum environment to ensure timely delivery of business-driven features.	
Frontend Developer Peol Technology Pvt Ltd	Pune 2022 - 2024
Peol technology we provide comprehensive SAP solutions and services, specializing in consulting, advisory, implementation, application development. - Developed a renewable energy asset monitoring web application using Angular and TypeScript, enabling efficient tracking of Purchase Orders and performance. - Built data-driven modules to capture, process, and evaluate performance against defined energy standards. - Created interactive dashboards and visualization components to provide real-time insights into asset efficiency, productivity, and compliance metrics. - Integrated RESTful APIs to fetch and analyze large datasets, ensuring accurate and automated energy performance analytics. - Implemented automated reporting workflows, reducing manual intervention and improving reporting accuracy. - Optimized the application for scalability, reliability, and high-frequency data processing, ensuring smooth performance in large-scale environments. - Collaborated with cross-functional teams to align business requirements with technical implementations and ensure seamless frontend-backend integration. - Performed performance tuning, debugging, code reviews, and refactoring to maintain application quality and enhance maintainability.	

Projects

Unity Next (Cloud-Based QC Data Management Platform)

Pune

Developed core modules for Bio-Rad's cloud-based SPA clinical laboratory QC platform. Engineered a reusable, inheritance-based component architecture for the **Connectivity Mapping UI**, enabling lab admins to bulk-map and manage complex 3-level data hierarchies (Instrument → Product → Analyte).

- **Implemented advanced data management features** including multi-code selection, bulk mapping, and intuitive side-navigation drill-downs, enabling lab administrators to manage reagent/calibrator lot mappings and track data streams faster and more accurately.
- **Built a dynamic Multi-License Feature module** with strict permission gating and responsive UI visibility to manage subscription tiers, control feature access, and adapt the interface dynamically based on the active lab account configuration.
- **Designed and developed intuitive administrative workflows** to handle complex enable, disable, and delete lifecycles for instrument codes, ensuring data integrity and system reliability during active clinical laboratory operations.
- **Optimized Angular components and shared UI modules** for high reusability and scalability, which minimized code duplication, handled complex nested data structures efficiently, and significantly reduced future frontend maintenance efforts for the product lifecycle.
- **Engineered the core Connectivity Mapping UI** using a robust shared entity-map component architecture (base class with inheritance) to seamlessly parse and map incoming instrument data across a complex 3-level hierarchy (Instrument → Control/Product → Analyte/Test).

ELIPO

BLR

A web application developed to monitor interface that gives the Accounts Payable team real-time visibility into the entire lifecycle of an invoice from initiation to settlement. Designed and developed the homepage UI to highlight core features and improve user onboarding.

- **Implemented comprehensive Vendor and Invoice listing pages** with advanced search and multi-parameter filtering functionality, enabling accounts payable teams to discover and track specific invoices faster and more accurately.
- **Built dynamic Invoice Detail and Vendor Profile views** displaying critical metadata, payment lines, tax breakdowns, and live approval statuses using robust dynamic data binding in Angular.
- Ensured responsive, cross-platform design for seamless performance across mobile and desktop devices.
- **Integrated frontend modules with core REST APIs and SAP/ERP middleware** to fetch and display real-time invoice information, audit trails, and vendor compliance details.
- **Optimized Angular components and shared UI modules** for high reusability and scalability, which minimized code duplication and significantly reduced future frontend maintenance efforts for the product lifecycle.

Education

B.E., Computer Science & Engineering Gogte Institute of Technology
Bachelor's of Engineering 2021
